Kilger, M. (Author & Presenter), & Boals, T. (Author), "The exponential growth in mobile devices such as smartphones and tablets has spurred interest in these devices for

several key reasons. First is their use as a new method of survey administration. A number of researchers are utilizing smartphones and tablets already owned by respondents as portable survey instrument delivery and data collection platforms. The second reason researchers are interested in these devices is they can also be used as passive data collection devices. With mobile metering technology downloaded on their devices, they can be used to record how respondents use their smartphones and tablets to surf the web, consume traditional media such as television shows and movie as well as music, utilize voice and alternative forms of communication such as texting and picture messaging and deploying geospatial data in their everyday lives. This is the focus of the paper., " American Association for Public Opinion Research Annual Conference, American Association for Public Opinion Research, Orlando, FL. (May 17, 2012).
